Muhammad Afham

Islamabad, Pakistan | (+92) 3073223042 | mafham678@gmail.com | www.linkedin.com/in/muhammad-afham143

PROFESSIONAL SUMMARY

Backend Java Developer with 5+ years of experience building scalable enterprise systems using Java (8/17/21), Spring Boot, and Microservices for telecom and banking. Skilled in REST APIs, JPA/Hibernate, MySQL/MariaDB, Kafka, RabbitMQ, Docker, and Kubernetes, with focus on API security, performance, and clean architecture. Delivered Salam DMS, Ufone B-SMS (OBD feature), WhiteLabel, and Citi Bank Reporting; modernized Vaadin to Spring Boot; built billing/charging workflows; implemented JWT/RBAC security; and automated processes that cut manual effort by ~90% and improved performance by ~25%.

SKILLS

- Java (8/17/21), OOP, Multithreading, Spring Boot, Spring Security, Microservices, Vaadin 7, Scala, REST APIs, JWT, Keycloak
- Hibernate/JPA, HQL, MySQL, MariaDB, SQL, CTEs, Apache Kafka, RabbitMQ, Apache Spark, Hadoop, Hive, Impala, YARN
- Docker, Kubernetes (K8s), Jenkins, CI/CD, Maven/Gradle, Git, Jira, Agile (Scrum), SMTP, Cron Jobs, Postman

EXPERIENCE

Software Engineer Integration **01/2023 – Present**
Evamp & Saanga Islamabad, Pakistan

- Promoted to Software Engineer Integration within 12 months based on strong technical performance and contributions.
- Designed and developed scalable backend systems using Java, Spring Boot, Microservices, MySQL, and MariaDB with focus on performance, maintainability, and modular architecture.
- Built and maintained RESTful APIs for seamless integration across internal and third-party systems, enabling complex cross-platform communication.
- Led backend development for Salam DMS, Ufone B-SMS, and Ufone WhiteLabel (built from scratch); also provided Spring Boot support for SNG-II and Pakistan Citizen's Portal (PCP).
- Implemented role-based access control (RBAC), JWT-based security flows, automated Cron/SMTP workflows, and reporting systems, reducing manual invoicing/reporting effort by ~90%.
- Improved system performance by ~25% through SQL optimization, Hibernate/JPA (JPQL/HQL) tuning, and backend improvements.
- Mentored junior developers, conducted code reviews, and followed Agile practices (sprint planning, standups, retrospectives).

Software Design Engineer (Part-time, Remote – US-Based Company) **07/2025 – 09/2026**
HexaSoft Innovations Islamabad, Pakistan

- Developed and maintained backend services using Java, Spring Boot, and Microservices for enterprise applications in an Agile remote environment.
- Built REST APIs, backend modules, and database integrations for Worx24 Gym Management System.
- Contributed to Citi Bank Business Reporting (Big Data) using Spark, Hadoop, Hive, Scala, CTEs, YARN, and Kafka for large-scale data processing and multi-region reporting (LATAM, APAC, Japan, MENA).
- Worked on the Verifone project in a modular enterprise payment ecosystem with multi-vendor components, resolving enhancements/CRs across Commander, POS (Point of Sale) communication layers, and pump simulator integrations.
- Collaborated with cross-vendor teams to resolve critical CRs and ensure smooth deployment.

Android Developer **06/2022 – 12/2022**
Eziline Software House Pvt Ltd Rawalpindi, Pakistan

- Developed Android applications using Java and Android SDK, including the UE Merit Prediction app for the University of Education.
- Built UI features and applied OOP principles for usability, performance, and maintainable code.
- Debugged crashes/defects and delivered stable feature releases in collaboration with the team.

PROJECTS

Ufone WhiteLabel **03/2025 – Present**

- Secure enterprise SMS portal under Ufone B-SMS for managing Large Account (LA) traffic through dedicated channels.
- Built the portal from scratch using Java 21, Spring Boot, Microservices, JPA/Hibernate (JPQL), and MySQL/MariaDB.
- Implemented RBAC, JWT authentication, OTP-based MFA, CAPTCHA, CORS, and IP whitelisting with brute-force login protection.
- Developed traffic handling, dynamic charging, and invoice/CDR modules with Spring transaction management (@Transactional); used cursor-based pagination for efficient reporting; automated invoice/email via Cron and SMTP.
- Designed a microservices architecture with independent services; integrated via RestTemplate/Feign Client and HAProxy for load balancing/routing (without Eureka/API Gateway).
- Containerized services with Docker, contributed to CI/CD, and tested LA-based SMS routing APIs using Postman in an Agile setup.

Ufone Business SMS (B-SMS) **06/2023 – Present**

- Ufone Business SMS (B-SMS) web platform for corporate customers, catering to marketing and customer engagement through transactional OTP/alerts, promotional messages, notifications, internal communications, and OBD voice services.
- Covers SMS management, billing/charging, invoicing, reporting, authentication, API integrations, and scheduled automation jobs.
- Developed OBD (Outbound Dialer) using Vaadin 7 integrated with Asterisk PBX (Private Branch Exchange) for transactional OTP calls, promotional calls, and survey calls.
- Revamped legacy B-SMS platform from Vaadin 7 to Spring Boot, re-architecting core modules including OBD and implementing dynamic charts, HTML reports, and portal enhancements, improving reporting and user experience and usability by ~30%.
- Implemented JWT authentication, OTP verification, CAPTCHA, CORS, RBAC, IP whitelisting, and WAF-oriented protections (request filtering, bot/abuse controls) at the application edge for secure multi-vendor access.
- Built SMS/OBD capabilities including contacts/groups, sender masking, templates, campaign scheduling, quotas, and audio handling for outbound campaigns.
- Optimized reporting system by implementing cursor-based pagination over offset pagination, and enhanced invoice generation with dynamic reports and dashboards using JPA Specifications (JPQL).
- Implemented reverse charging for On-Net SMS (customer billing flow) and developed MO charging functionality, enabling end-to-end billing control for messaging services.
- Automated email reporting and workflows using Cron jobs and SMTP for invoices and operational reports.
- Added rate limiting (Bucket4j), monitoring (Actuator/Prometheus), Docker packaging, and CI/CD support for production-ready Spring Boot APIs.

Citi Bank Business Reporting (Big Data) **07/2025 – 09/2026**

- Big Data business reporting platform for large-scale analytics and multi-region financial reporting.
- Contributed to data processing pipelines using Apache Spark, Hadoop, and Scala for high-volume analytics.
- Processed and transformed datasets using Hive, CTEs, Impala, and YARN to extract business insights and reporting data.
- Expanded reporting coverage from LATAM to APAC, JAPAN, and MENA with region-specific processing and reporting pipelines.
- Built optimized data pipelines and published processed business data to Apache Kafka for downstream reporting and integrations.

Salam DMS (Dealer Management System) **01/2023 – 05/2023**

- Salam Dealer Management System (DMS) provides a comprehensive web portal and user-friendly mobile app for Salam Telecom dealers to manage SIM activation, balance transfers, number portability, wallets, and sales operations.
- Developed REST APIs using Java, Spring Boot, and JPA/Hibernate (JPQL/HQL/JDBC) across microservices to support dealer operations including SIM activation, balance transfer, and number portability, by role and access level.
- Implemented secure third-party integrations (TPI Service) with systems such as Semati and Optiva BSS; integrated Keycloak for JWT auth/session control with API Gateway routing and user-level authentication.
- Contributed to Channel (dealer hierarchies), Wallet (transactions/top-ups with transactional consistency), Commission (indirect sales incentives), and Reports (transaction and wallet summaries) modules using domain-driven design and clean code practices for scalable dealership operations.

UE Merit Prediction App (Final Year Project) **04/2022 – 08/2022**

- Android app for University of Education (Vehari Campus) to predict a student's admission chances for specific programs/shifts using historical merit data.
- Led end-to-end development using Java and Android SDK with a focus on usability and performance.
- Implemented supervised ML models — Support Vector Machine (SVM) and K-Nearest Neighbors (KNN) — and integrated them for real-time admission insights.
- Designed and deployed an intuitive user interface to ensure accessibility for prospective students.
- Streamlined the admission process, reducing workload for university staff and improving decision-making for applicants.

EDUCATION

- **Bachelor of Science** in Information Technology **|** University of Education (Vehari campus) **2018 – 2022**
- **FSc** (Pre-Engineering) **|** Vista H.S.S Mailsi **2015 – 2017**

CERTIFICATIONS & AWARDS

- Oracle Agentic AI Certified Foundations Associate — **Oracle** **Oct 2026**
- Oracle Java Foundations — **Oracle** **Oct 2024**
- Build Scalable Apps with Java Reactive Programming in Spring Boot — **Koenig** **Jul 2025**
- Oracle 19c Multitenant Architecture for DBAs — **Koenig** **Sep 2024**
- Employee of the Month — **Evamp & Saanga** **Feb 2026**
